

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-5 (canceled).

Claim 6 (previously presented): A method for the production of circuit boards comprising the steps of:

- drilling through-bores for establishing through-connections;
- through-connecting, wherein an electrically conductive general layer is built up;
- etching a strip conductor image into the electrically conductive general layer;
- filling of the bores of the through-connections with a medium;
- lacquering of the surfaces on which through-connections are present and, at least in the proximity of which, strip conductors are later provided;
- applying an insulating lacquer to the surfaces of the circuit board; and
- producing strip conductors arranged above the through-connections.

Claim 7 (previously presented): The method as claimed in claim 6, wherein the medium used in filling the bores and insulating lacquer is identical.

Claim 8 (currently amended): The method as claimed in claim 6, wherein the medium used in filling the bores and the insulating lacquer is a ~~low-cost lacquer~~standard media variant.

Claim 9 (previously presented): The method as claimed in claim 6 wherein the strip conductors arranged above the through-connections are carbon.

Claim 10 (previously presented): The method as claimed in claim 6, further comprising separating individual circuit boards by means of a milling process.

Claim 11 (previously presented): The method as claimed in claim 6, wherein the through-bores are 20 μm in size.

Claim 12 (currently amended): The method as claimed in claim 6, wherein the insulating lacquer is an ~~ISO~~ International Standard Organization lacquer.
